PAGE 1 OF 1 PAGES

It is a common mistake to think that the only way to avoid the problems of the first two methods is to use a third method, the method of least squares. This method is also based on the assumption that the data are normally distributed, and it is also subject to the same problems as the first two methods. The method of least squares is only a special case of the method of maximum likelihood, and it is only valid when the data are normally distributed.
