Abstract—The purpose of this study was to determine if there were differences in the prevalence of musculoskeletal disorders between two groups of nurses working in different departments of a hospital. The sample consisted of 100 nurses from the Intensive Care Unit (ICU) and 100 nurses from the General Ward (GW). Data were collected by means of a self-administered questionnaire. Results showed that the prevalence of musculoskeletal disorders was higher among ICU nurses than GW nurses. The most prevalent disorder was low back pain, followed by neck pain and shoulder pain. The results suggest that interventions aimed at reducing the risk of musculoskeletal disorders should be targeted towards ICU nurses.
