1. The purpose of this study was to determine the effect of the use of a computer-based system on the performance of a task. The study was conducted in a laboratory setting. The participants were divided into two groups: a control group and an experimental group. The control group used a traditional method, while the experimental group used the computer-based system. The results showed that the experimental group performed significantly better than the control group. The study was limited by the small sample size and the laboratory setting. Further research is needed to confirm the findings of this study.
